

III INTERNATIONAL SCIENCE AND TECHNOLOGY WEEK IN ZARAGOZA

FACULTY OF SCIENCE AND SCHOOL OF
ENGINEERING AND ARCHITECTURE
UNIVERSITY OF ZARAGOZA

Conference Nanomaterials: tools of the next technological revolution

Jesús Santamaría

Nanoscience Institute of Aragón and Department of
Chemical Engineering

Monday 1st July 2019
10:30 Sala de Grados
Faculty of Science

Nanotechnology and nanotechnology products are already part of our daily life and have become an economic reality. The production rates of several nanomaterials are estimated at hundreds or even thousands of ton/year, and there are already over 9000 commercial products containing nanomaterials, with a global market value exceeding 4 trillion (4×10^{12}) US dollars in 2018.

This talk will describe how nanotechnology is already changing our lives. Special emphasis will be put on applications on health, within the field of Nanomedicine.
