a new challenge every day

Procter&Gamble

his colours are your challenge

P&G Career Academy presents:
***R&D European
PhD Seminar***

Can you keep his colours bright?

Procter & Gamble's R&D PhD Seminar will give you the opportunity to experience the challenging working world of our R&D organisation, practise the skills needed to be successful, and evaluate your potential for a career in Research & Development.

You will do this via a series of exercises and case studies working closely with other European students and with trainers from P&G on the following topics: applying technical knowledge, solving problems, making decisions, setting priorities, communicating ideas, motivating people, working as part of a team.

**It will be hard work and a lot will be asked of you,
but you will also have a lot of fun!**

Procter&Gamble

What former
participants have said ...

Peter Gray

"The case studies in the seminar portrayed real life experiences of P&G managers, and showed me how to combine leadership skills with working in a productive teamwork environment."

Claire Davison

"I was surprised at how much we achieved and learned in such a short time. The evenings were fun too – with great food and good company."

Erwin Mark

"P&G gave us a good insight into how R&D works in a consumer goods company. It is fascinating how much high-tech is behind every day products! The R&D community is quite international, which was also reflected in our group of participants. This diversity is a big personal benefit of the seminar, amongst others, like training on team-work or leadership."

Tina Liebe

"The P&G PhD Seminar was extremely valuable for me, because of the experience to meet so many different R&D employees – in terms of background, nationality and position. I could talk freely about the pros & cons of working in R&D, especially in the relaxed atmosphere during the social evening-get-together."
