Centre National de Recherches Météorologiques

VISITING SCIENTIST POSITIONS

The research department of the French Meteorological Service (METEO-FRANCE, Centre National de Recherches Météorologiques - CNRM) offers visiting scientist positions for one year in its centres of Toulouse (south-western France) or Grenoble (Alps) . This opportunity is for post-doctorate graduates, of any nationality except French.

Research areas of interest are :

* in Toulouse : synoptic and mesoscale observations assimilation, mesoscale numerical modelling and experiments, climate modelling and detection of climate change, convection, convective and synoptic scale predictability, nowcasting using NWP models, mid-latitude cyclogenesis study, atmospheric chemistry and air pollution forecasting, study and modelling of aerosols, urban meteorology, meteorological instrumentation, ground based, airborne and satellite remote-sensing, hydrology.

* in Grenoble : studies and modelling of snow cover , snow hydrology, snow cover microstructure, processing of seismic signals generated by snow avalanches.

Applicants should send, before April 1st, 2007, a file including :

- a comprehensive curriculum vitae, describing previous scientific activities ;
- a proposal for a research topic ;
- letters of support.

They will be brought into contact with a scientist belonging to CNRM, in order to define more precisely a possible research programme.

Notice of the final decision will be given to applicants before the end of May, 2007, for a position starting between October 1st, 2007, and February 1st, 2008.

APPLICATIONS TO BE SENT TO
