

Amphos 21 is looking for a Senior Chemist

The candidate will be responsible for the management and execution of consultancy projects dealing with a range of geological and chemical issues associated with the management and disposal of radioactive wastes. Skills in at least one of the following disciplines are required:

- chemical stability and behaviour of waste matrices,
- quantitative chemical modelling,
- radioactive safety assessment of deep or surface facilities or
- radiological safety and protection

Team working, interaction with clients and excellent reporting, communication and presentation skills will be specially valuable.

5 or more years of experience in this field are preferable.

If you meet the above requirements and are motivated and interested to team working and continuously learning and offering new and advanced solutions to challenging environmental questions, contact us at amphos21@amphos21.com

indicating in the subject of your message **13-2-E- Senior Chemist**
